

SDG Activity – “Green Zone”

Green zone

As part of the SDG Project on Green Environment, students created a small “Green Zone” in the classroom using the space near the window. They planted saplings and arranged small pots to bring greenery into the classroom. This activity helped students understand the importance of tree plantation, caring for plants, and maintaining a clean and eco-friendly environment. It also made the classroom more pleasant and encouraged students to take responsibility for protecting nature.
