

Plastic - Free School :- A Dream We Can Achieve

Imagine entering a school where there are no plastic wrappers lying on the ground and every waste bin is used correctly. This can become a reality if students and teachers work together.

Our school can reduce plastic by avoiding single-use plastic decorations and encouraging reusable materials. Separate bins can be provided for wet and dry waste.

Students can participate in plastic collection drives and awareness programmes. They can also create posters with messages such as "Reduce, Reuse and Recycle."

A plastic-conscious school teaches students lessons beyond textbooks. It teaches responsibility, discipline and respect for nature.

A plastic-free school can become an example for the entire community.
