

* The Role of Students in reducing * * plastic waste *

Students are important members of Society and can contribute greatly to protecting the environment. They can begin by avoiding unnecessary plastic in their daily lives. Students can carry reusable bottles, lunch boxes and cloth bags. They can refuse plastic straws and other single-use items whenever possible.

Another important responsibility is waste segregation. Plastic waste should be separated from waste and wet waste and placed in the correct dry-waste collection system.

Students can also conduct awareness campaigns, prepare posters, organise collection drives and teach younger children about plastic pollution.
