

## Turning Waste into a Solution

As part of our commitment to climate action and sustainable living, Navrachana Higher Secondary School, Sama conducted a series of activities focused on waste segregation, plastic reduction, reuse, and recycling. Through creative projects such as making envelopes from used paper bags, reusing old notebooks under "**Purane Panne, Naya Rang,**" and awareness campaigns on responsible consumption, students learned the importance of the 3Rs: Reduce, Reuse, Recycle.

The SDG Club also explored waste management practices through an interaction with the school canteen manager and presented a skit, "Every Grain of Food Has Value," highlighting the importance of reducing food waste and conserving resources.

A key highlight of the programme was the Eco-Brick Making Initiative, where students collected and repurposed plastic waste into Eco-Bricks. This hands-on activity helped students understand responsible plastic disposal while fostering teamwork, creativity, and environmental responsibility.

The school also promoted cloth bag usage and organized a cloth donation drive, with collected clothes handed over to the Samkhya Foundation for recycling.

Through these initiatives, students moved beyond awareness and took meaningful action towards environmental sustainability.

**Our Motto is: "Reduce what you use, reuse what you can, recycle what remains, and turn waste into a solution"**
